(Vol. 35, No. 12)

## SUMMARY OF THE PROVED-SIRE RECORDS COMPILED IN 1959

During the first 10 months of 1959, 3,641 proved-sire records were compiled from dairy-herd-improvement association data. On November 1 the manual punch-card system of compiling proved-sire records was discontinued when work was begun on converting the system to automated procedures using electronic data processing equipment.

It is now estimated that the sire-proving record system will be converted and proved-sire records will be compiled using the new procedures soon after April 1, 1960. Therefore, the following summary is based on all the DHIA proved-sire records that will be compiled in 1959.

The following tabulations give a brief summary of the proved-sire records compiled from dairy-herd-improvement-association data in 1959:

Table 1.--Number of sires reported alive or dead, and the production of their daughters compared with that of the daughters' dams

Status of sires	Average production							
	Dams				Daughters			
	Milk	Butterfat	Milk	Butterfat	Milk	Butterfat	Milk	Butterfat
	No.	Pct.	Lb.	Pct.	Lb.	Lb.	Pct.	Lb.
Living-----	554	15.2	10,366	4.3	445	10,740	4.3	467
Dead-----	1,776	48.8	10,617	4.0	428	10,409	4.1	424
Not reported--	1,311	36.0	10,493	4.1	427	10,268	4.1	422
Total or av.	3,641	100.0	10,534	4.1	430	10,408	4.1	430

Table 2.--Number of living sires listed by age and breed

(years)	Ayrshire	Brown Swiss	Guernsey	Holstein	Jersey	Red Poll	Shorthorn	Total

Total <sup>2/</sup>	182	143	860	1,825	569	3	58	<sup>3/</sup> 2	3,641

<sup>1/</sup> The number listed for each State frequently includes 1 or more sires proved with records from some other State as well as from the State indicated.

<sup>2/</sup> The totals given here omit duplication of sires.

<sup>3/</sup> 1 of the American Dairy Cattle Club sires was also registered in another breed association.

# DHIA PROVED-SIRE RECORDS TABULATED IN NOVEMBER 1959

Following is a list of 191 sires whose records were tabulated or retabulated by the Animal Husbandry Research Division in November 1959. Production records used in proving DHIA sires consist of 305-day lactation records standardized to a mature equivalent twice-a-day milking basis.

An asterisk at the end of a sire's registration number indicates a retabulated record. The asterisk may be followed by any number from 1 through 15 (i. e., \*12) to indicate in which of the 15 printed lists his previous record appeared. Or the asterisk may be followed by the month and year (i. e., \*May 51) of the DHIA letter in which his previous record appeared. Two asterisks following the sire's registration number, or following reference to a previous listing, indicate that the proved-sire tabulation or retabulation was requested by one of the States.

In case records from more than one herd were used, the reference is to the herd from which production records for the largest number of the sire's youngest daughters were reported. If the sire has been used in an artificial-breeding association, the name of the association is given.

Proved-sire records consisting of fewer than 10 comparisons are indicated as "preliminary proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

Proved-sire records consisting of fewer than 25 comparisons with daughters resulting from artificial breeding are indicated as "preliminary AB proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

To make the most intelligent selection of a sire, the dairyman should use these proved-sire records to single out the most promising sire and then make every effort to supplement these data with additional information gathered from the herds in which the dams and daughters made their records. Particular attention should be given to the feeding practices and environmental conditions under which the records were made, in order to be assured that the records of the daughters were not made under more favorable conditions than those of the dams or vice versa. It is especially important to determine that there has been no selection of daughters in making the comparison.
